

Determining the size of your handlebar:

- 1 - Check to make sure this page has printed to scale by measuring the length of the control lines below.
- 2- You can either measure the stem (without the handlebar and/or the bar itself).
- 3- To measure the stem measure the inside diameter of the hole where the handlebar will be mounted (see upper left).
- 4- To measure your handlebar directly you can carefully cut out the strips on the right and use them to wrap around the bar. One of them should reach exactly around the circumference of the handlebar.

Scale test for print accuracy on A4 size paper
